

ARUN BASAVARAJ ALUR

(602) 743-0852 — aalur2@asu.edu — linkedin.com/in/arun-basavaraj-alur — github.com/ArunAlur

Professional Summary

Backend-focused Software Engineer with hands-on experience building cloud-native backend services using Java, Python, Spring Boot, and AWS. Seeking New Grad / SDE I backend roles.

Education

Master of Science in Information Technology

August 2024 – May 2026

Arizona State University ; GPA: 4.00/4.00

Tempe, AZ

Bachelor of Technology

August 2018 – May 2022

KLE Technological University; GPA: 3.6/4.0

Hubli, India

Technical Skills

Languages: Java, Python, SQL, JavaScript, TypeScript,

Backend & Distributed Systems: Spring Boot, REST APIs, API Design, Microservices, Distributed Systems, Node.js, Flask, GraphQL, Hibernate

Cloud & Infrastructure: AWS (Lambda, S3, DynamoDB, CodePipeline), Docker, Kubernetes, CI/CD, Jenkins, Linux

Databases: PostgreSQL, DynamoDB, SQL/NoSQL, Vector Databases

Testing & Observability: JUnit, Mockito, Integration Testing, Prometheus, Logging, Monitoring

AI & Data: OpenAI GPT, LangChain, Kafka, Spark, NLP

Frontend: React, Next.js, Tailwind CSS, Chart.js

Experience

Amazon

May 2025 – August 2025

Software Developer Intern

Seattle, USA

- Engineered multi-pipeline invocation **within a backend CI orchestration service** in **AWS CodePipeline**, enabling deterministic failure handling across **200+ pipelines** and improving large-scale CI reliability by 7%
- Implemented backward-compatible invoke actions **in a backend service** using **Java, Spring Boot**, and **AWS APIs**, supporting **distributed cross-service** validation workflows for **15 engineering teams**.
- Strengthened release quality **of backend systems** by authoring comprehensive **JUnit/Mockito** test suites achieving **92% coverage**, while defining **service-level** production alarms and operational runbooks.
- Prototyped an AI-powered PR assistant **as internal backend tooling** to surface logs **across services** and configuration checks, reducing incident triage resolution time from **45 minutes to 28 minutes**.

Accenture

September 2022 – July 2024

Software Engineer

Bangalore, India

- Designed and operated fault-tolerant **Java/Spring Boot backend microservices** handling **50K production daily requests** with sustained **99.5% uptime**.
- Built a full-stack **Python/Flask** application **with a backend service layer**, consumed by a **React** frontend for document analysis, leveraging **LangChain** and vector databases to streamline knowledge retrieval.
- Instrumented **backend system observability for distributed services** using **Prometheus**, cutting debugging and incident analysis time from **4 hours to 90 minutes**.

Projects

git-context | Python, FastAPI, React, TypeScript, Tree-sitter, Vercel | [git-context.com](https://github.com/arunbasavaraj/git-context)

2025 - Present

- Built a **4-phase AST-powered pipeline** (clone → filter → rank → assemble) that compresses any GitHub repo into a single **token-budgeted context file** (32k–200k tokens) for LLM ingestion, eliminating **20+ minutes** of manual curation per session.
- Engineered **language-agnostic AST extractors** across **5 runtimes** (Python, Java, JavaScript, Go, Rust) with **13 REST API endpoints** and a **FastAPI** backend deployed on **Vercel**.
- Reduced LLM context prep to a **single CLI command** by automating noise filtering (build artifacts, binaries, lock files) and surfacing **import-graph centrality rankings**.
- Extended the tool with an **MCP server integration** enabling direct context injection into **Claude, GPT-4, and Gemini**, with a real-time **Composer UI** managing session state across **111 source files**.
